Immunogen:	A synthesized peptide derived from human MAST2, corresponding to a region within the internal amino acids.	
Uniprot:	Q6P0Q8	
Description:	MAST2 appears to link the dystrophin/utrophin network with microtubule filaments via the syntrophins. Phosphorylation of DMD or UTRN may modulate their affinities for associated proteins. Functions in a multi-protein complex in spermatid maturation. Regulates lipopolysaccharide-induced IL-12 synthesis in macrophages by forming a complex with TRAF6, resulting in the inhibition of TRAF6 NF-kappaB activation. 2 isoforms of the human protein are produced by alternative splicing.	

Western blot analysis of extracts from HepG2 cells, using MAST2 Ab. The lane on the left was treated with blocking peptide.

IMPORTANT: For western blot, incubate membrane with diluted primary Ab in 5% w/v milk , 1X TBS, 0.1% Tween@20 at 4°C with gentle shaking, overnight.
