APG5L/ATG5 Ab

References(18) Images(10)

Cat.#: DF6010 Concn.: ~1mg/ml Mol.Wt.: 35kD,56kD(complex)

Size: Source: Rabbit Clonality: Polyclonal

Application: WB 1:500-1:2000, IHC 1:50-1:200

*The optimal dilutions should be determined by the end user.

Reactivity: Human, Mouse, Rat

Storage: Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02%

sodium azide and 50% glycerol. Store at -20 °C. Stable for 12 months from

date of receipt.

Purification: The antiserum was purified by peptide affinity chromatography using

SulfoLinkTM Coupling Resin (Thermo Fisher Scientific).

Immunogen: A synthesized peptide derived from human APG5L/ATG5, corresponding to

a region within C-terminal amino acids.

Uniprot: Q9H1Y0

Description: Autophagy is a catabolic process for the autophagosomic-lysosomal

degradation of bulk cytoplasmic contents (1,2). Autophagy is generally activated by conditions of nutrient deprivation but has also been associated

with a number of physiological processes including development,

differentiation, neurodegeneration, infection, and cancer . The molecular machinery of autophagy was largely discovered in yeast and referred to as autophagy-related (Atg) genes. Formation of the autophagosome involves a ubiquitin-like conjugation system in which Atg12 is covalently bound to Atg5 and targeted to autophagosome vesicles (4-6). This conjugation

reaction is mediated by the ubiquitin E1-like enzyme Atg7 and the E2-like

enzyme Atg10 (7,8).

Western blot analysis of extracts from Rat muscle, using APG5L/ATG5 Ab. The lane on the left was treated with blocking peptide.

<code>IMPORTANT:</code> For western blot, incubate membrane with diluted primary Ab in 5% w/v milk , 1% TBS, 0.1% Tween®20 at 4°C with gentle shaking, overnight.

procedures. Not for resale without express authorization.
