

FCER2 Ab

Images(1)

Cat.#: BF0627 Concn.: ~1mg/ml Mol.Wt.: 37kDa
Size: Source: Mouse Clonality: Monoclonal

Application: ELISA 1:10000, FCM 1:200-1:400

*The optimal dilutions should be determined by the end user.

Reactivity: Human

Storage: Mouse IgG1 in phosphate buffered saline (without Mg2+ and Ca2+), pH

7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at -20 °C.

Stable for 12 months from date of receipt.

Purification: Affinity-chromatography.

Immunogen: Purified recombinant fragment of human FCER2 expressed in E. Coli.

Uniprot: P06734

Description: The human leukocyte differentiation antigen CD23 (FCE2) is a key

molecule for B-cell activation and growth. It is the low-affinity receptor for IgE. The truncated molecule can be secreted, then functioning as a potent mitogenic growth factor.(supplied by OMIM) . It is expressed on most mature, conventional B cells (but not on peritoneal CD5+ B cells), and can also be found on the surface of T cells, macrophages, platelets and EBV transformed B lymphoblasts. Expression of CD23 has been detected in neoplastic cells from cases of B cell chronic Lymphocytic leukemia. CD23 is expressed by B cells in the follicular mantle but not by proliferating

germinal centre cells. CD23 is also expressed by eosinophils.

For Research Use Only. Not for use in diagnostic and therapeutic procedures. Not for resale without express authorization.
