Description:	CUL3 (Cullin-3) is a member of the cullin-based ubiquitin ligase family. By interacting with Hrt1 and BTB domain containing proteins, the complex functions as a CUL3-based E3 ligase to bring specific substrates to ubiquitylation and degradation . The CUL3 complex has been shown to target many substrates involved in cell cycle progression , transcription , development and differentiation (4,5).	

Western blot analysis of extracts from Mouse heart, using CUL3 Ab. The lane on the left was treated with blocking peptide.

IMPORTANT: For western blot, incubate membrane with diluted primary Ab in 5% w/v milk , 1X TBS, 0.1% Tween@20 at 4°C with gentle shaking, overnight.
